EXECUTIVE REPORT: Zomato Customer Behavioral & Revenue Analysis

Prepared By: Lentz Jean Francois, Marketing Intelligence Analyst

Date: March 19, 2026

1. PROJECT OVERVIEW

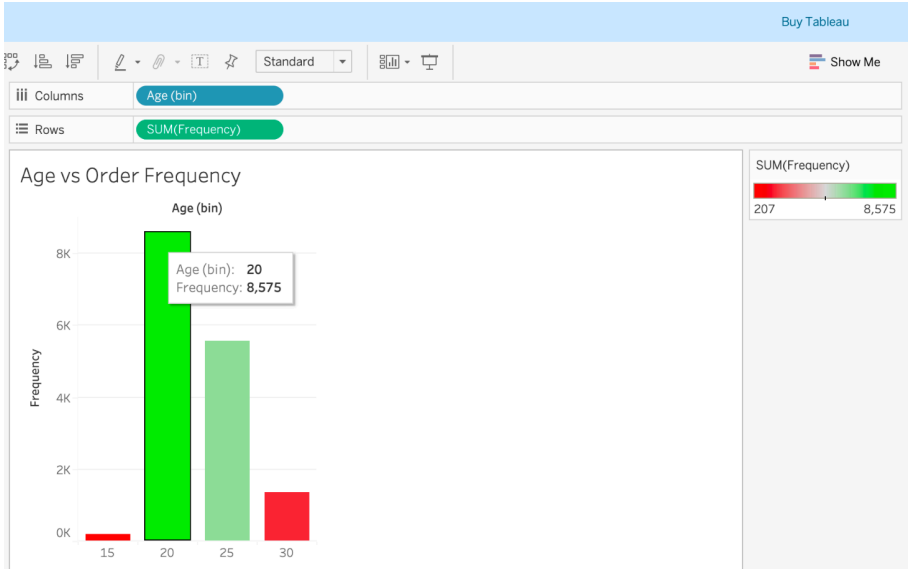
The objective of this analysis was to audit ₹986M INR in gross sales to identify high-value customer demographics and behavioral patterns. By leveraging Tableau's advanced visualization capabilities, this report provides a strategic roadmap for user retention and geographic resource allocation.

---

2. KEY INSIGHTS

A. Demographic Distribution: The 20-Year-Old Peak

- **Insight:** Data analysis reveals that the **15–30 age bracket** is the primary driver of Zomato's order frequency.
- **Strategic Impact:** The **20-year-old** and **25-year-old** cohorts represent the highest volume of users. This indicates that Zomato's long-term growth is tethered to the purchasing power of early-career professionals and students.



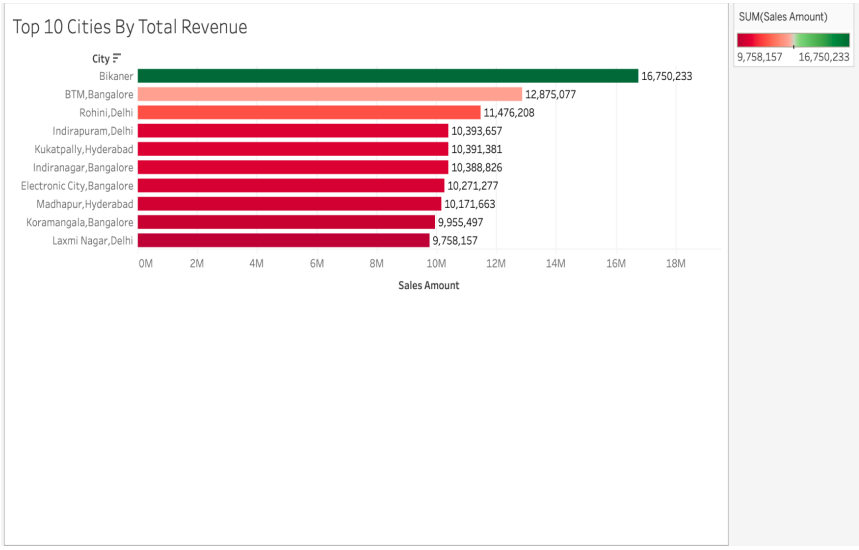
B. Behavioral Segmentation: The RFM Treemap

- **Insight:** The **RFM (Recency, Frequency, Monetary)** model categorizes the majority of active users as **'At Risk'** or **'Loyalists.'**

- **Risk Assessment:** While 'Loyalists' provide a stable foundation, the significant volume of 'At Risk' users—particularly in the high-frequency 20–25 age group—represents a potential revenue leakage that requires immediate intervention.

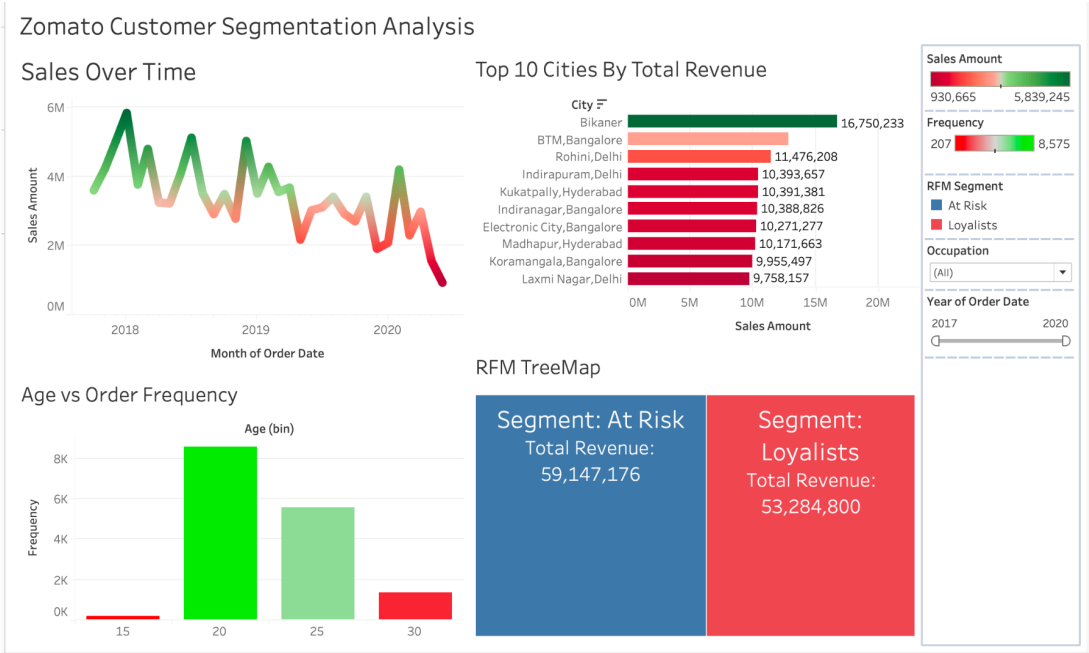
C. Geographic Revenue Drivers

- Top Performers: Bikaner is our clear MVP, generating 16.7M INR—nearly 30% more than our next best location, BTM, Bangalore.
- The Bangalore Cluster: We see a massive "cluster" of high sales across various Bangalore districts. This is a "hot zone" where our brand is already a household name.
- The Bottom Line: Instead of broad, expensive national ads, we should double down on Bikaner and Bangalore. By focusing our "Gold" memberships and fastest delivery riders here, we keep our most profitable customers happy and lower our overall costs.



3. INTERACTIVE BI DASHBOARD

- Operational Utility: I developed a unified command center featuring Interactive Slicers for Order Date, Occupation, and Sales Amount.
- Business Value: This tool enables stakeholders to perform real-time "what-if" analysis. For instance, filtering by 'Occupation' allows leadership to see if specific career types within the 20-year-old bracket are churning faster than others.



4. STRATEGIC RECOMMENDATIONS

- **Targeted Retention:** Launch a "Win-Back" campaign for the **'At Risk'** segment, offering personalized discounts to users in the 20–25 age bracket.
- **Loyalty Transition:** Introduce a student-specific loyalty tier to move high-frequency 20-year-olds from 'At Risk' to 'Loyalists' for long-term revenue stability.
